

## Follow the below steps to execute the project

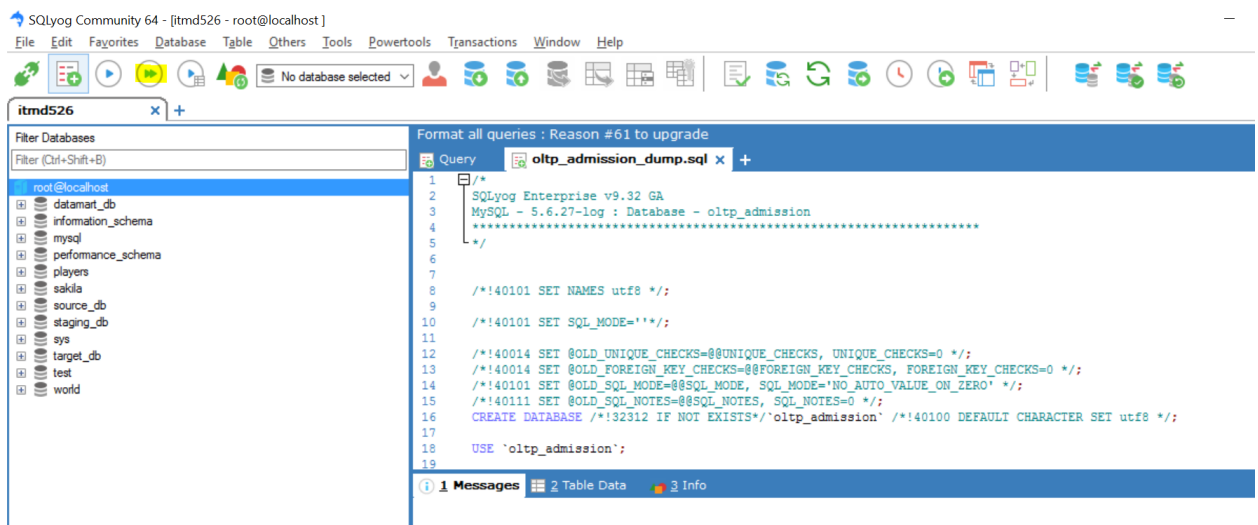

1. Open SQLyog. Choose File → Open

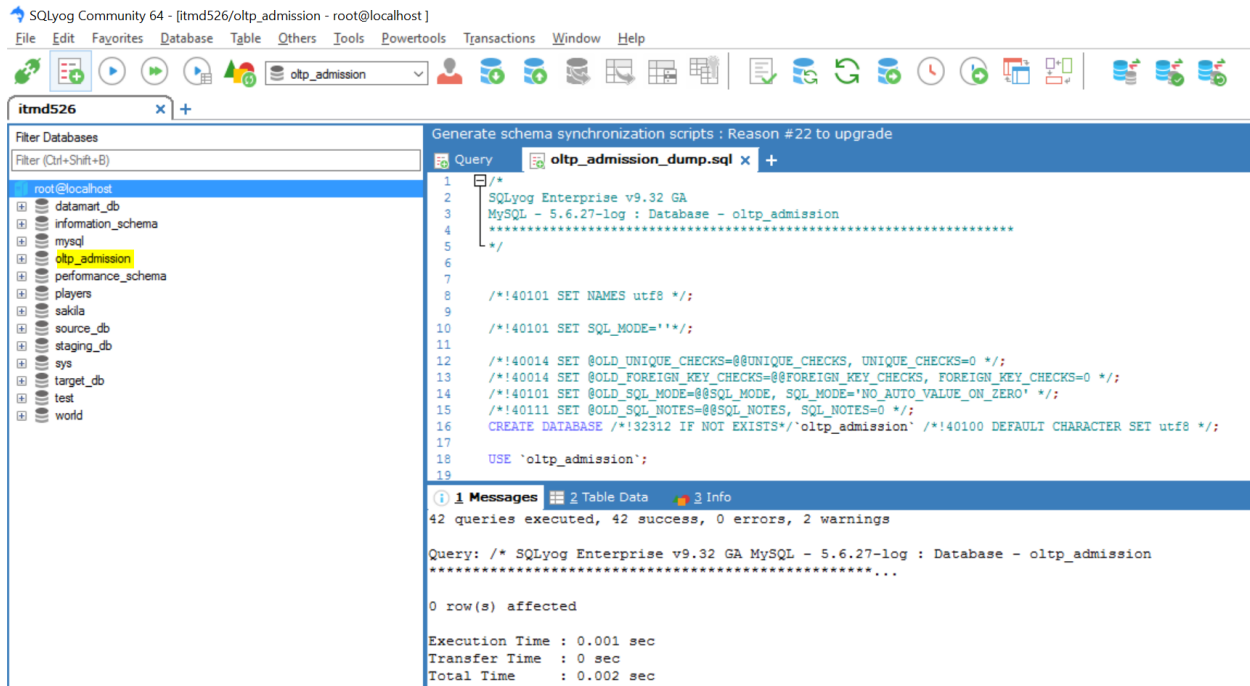

2. Select oltp\_admission\_dump from the submitted folder. Open

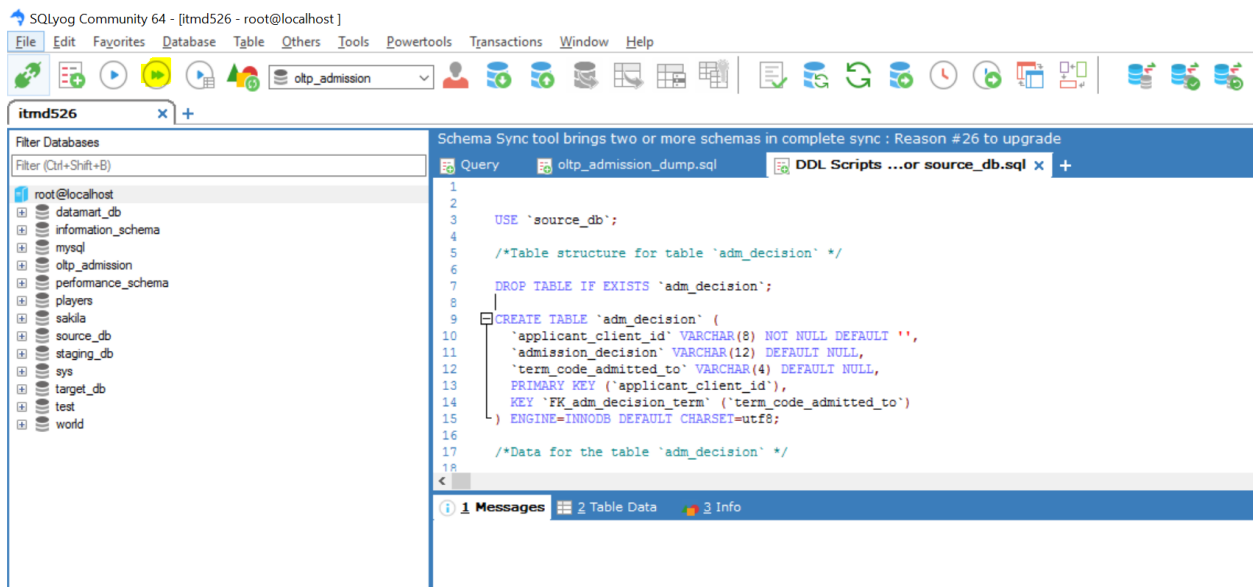

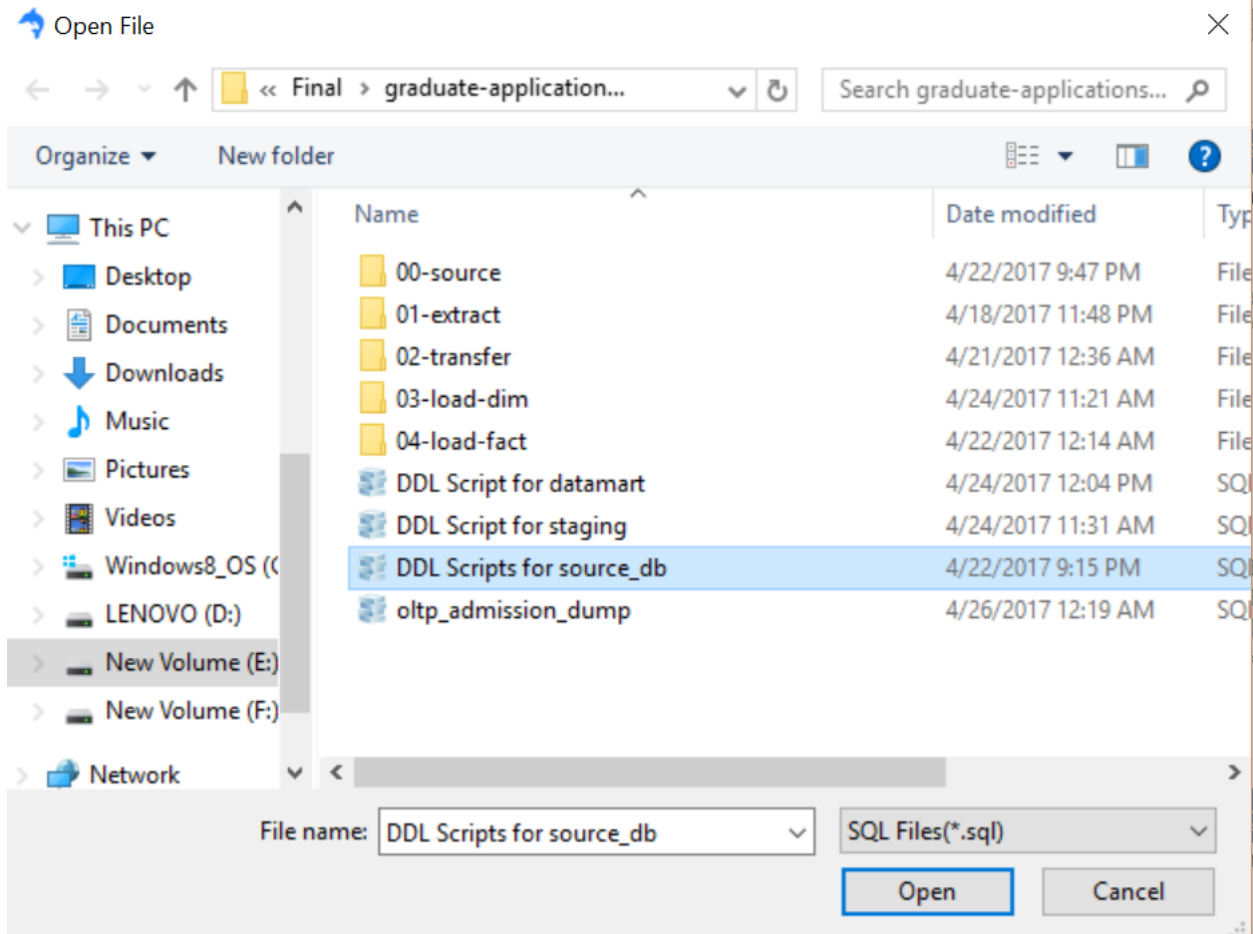

3. Execute the query by clicking the highlighted button

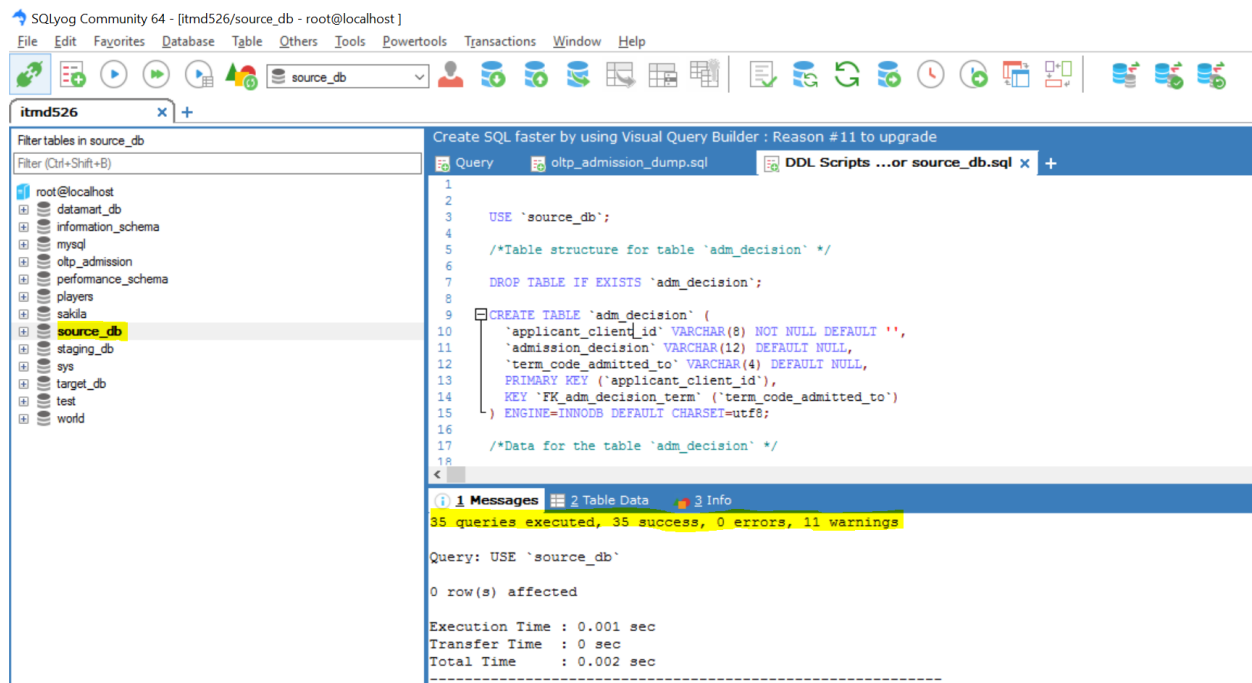

Query successfully created and database oltp\_admission is created.

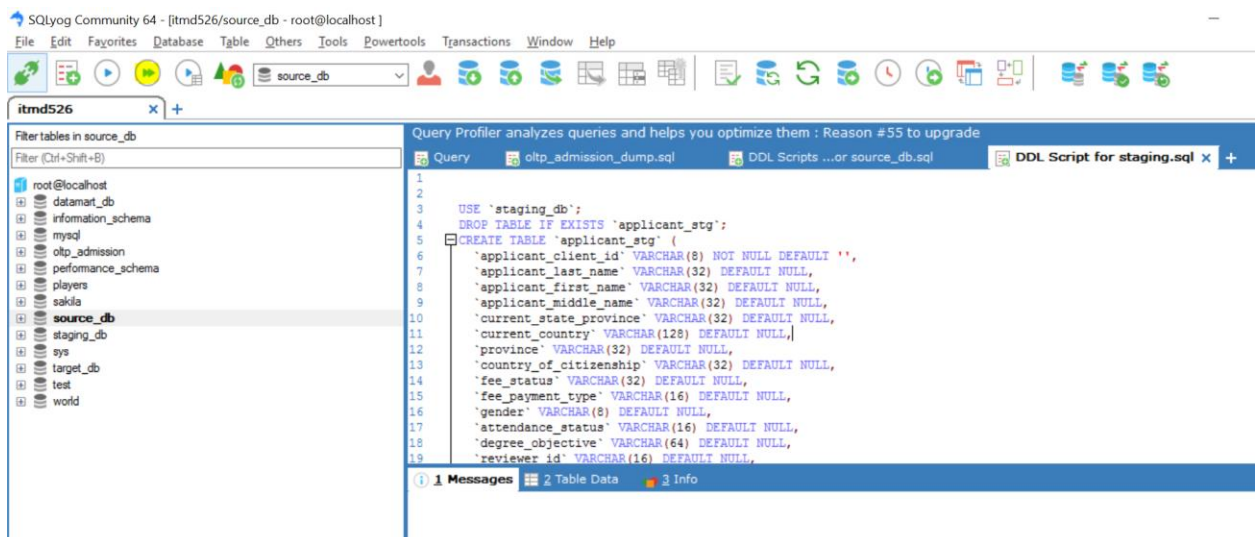

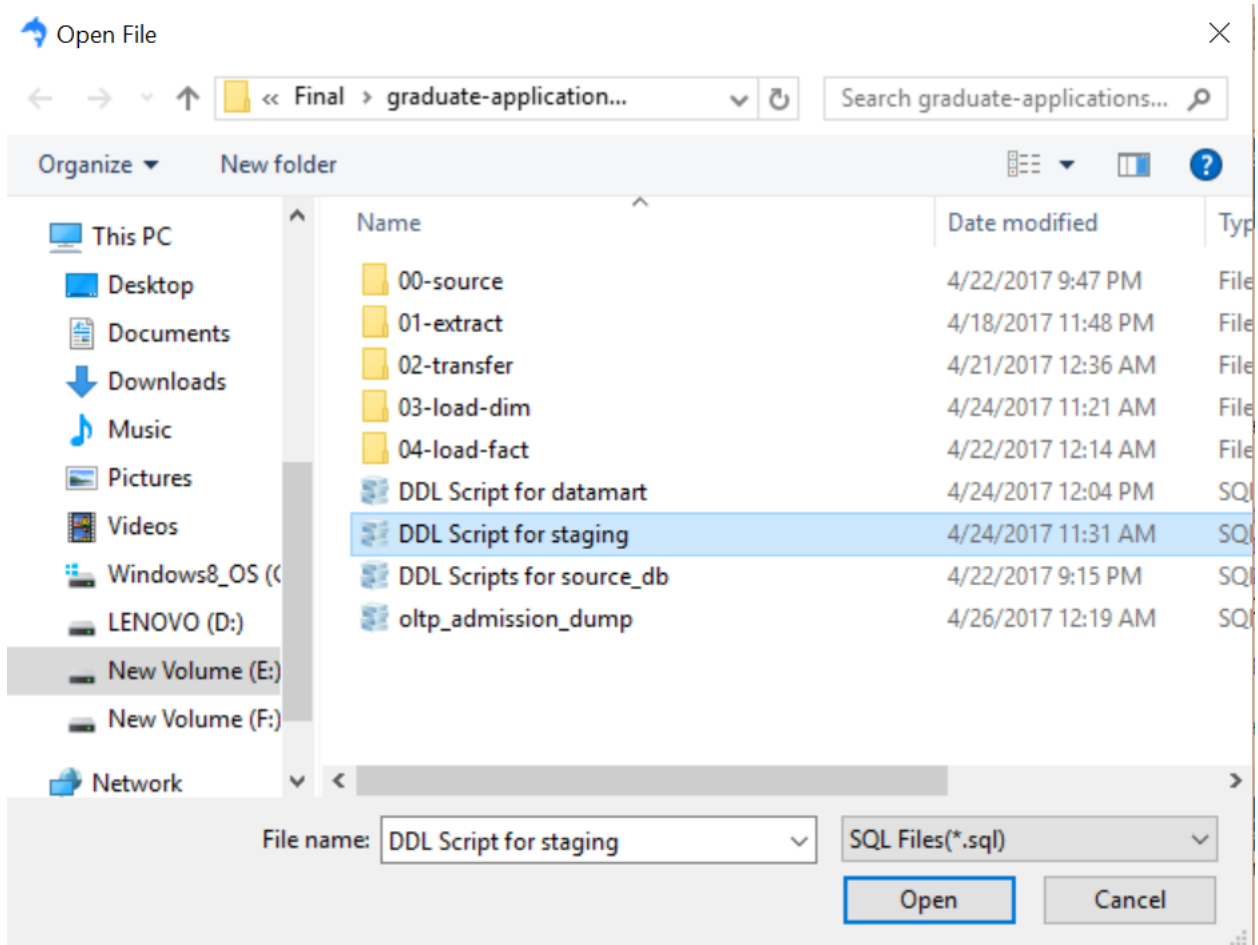

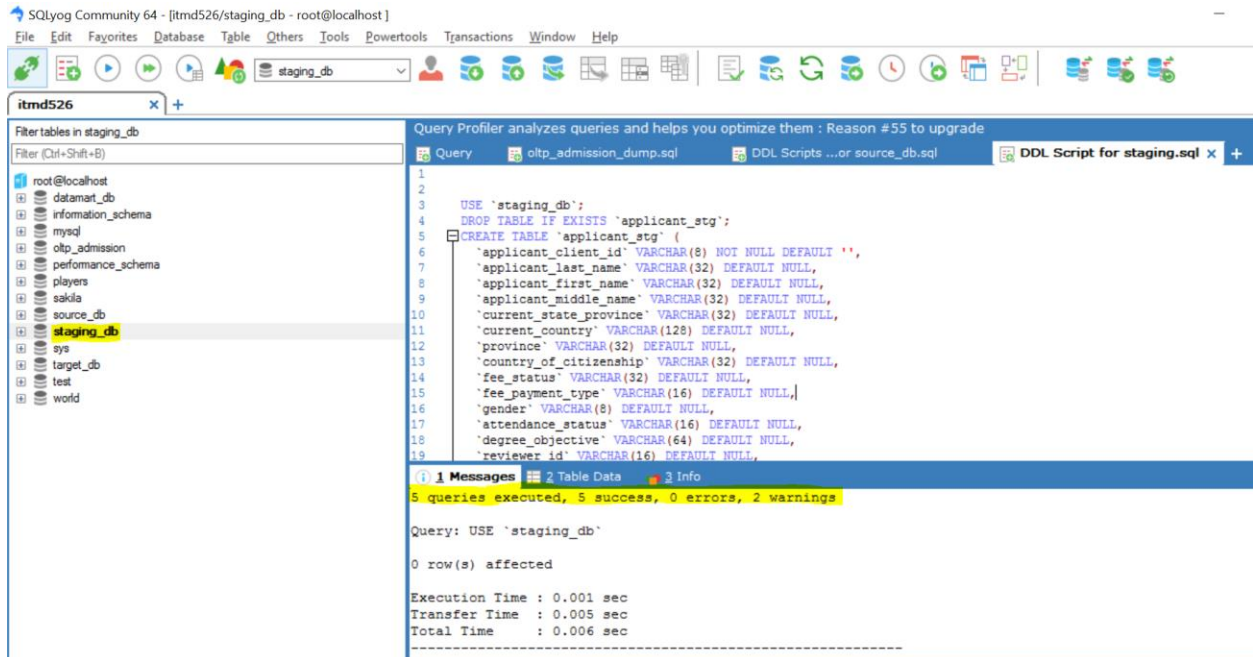

4. Open ddl scripts named “DDL Script for source\_db” , “DDL Script for staging” and “DDL Script for datamart” and execute as shown below
  - Execute DDL Script for source\_db

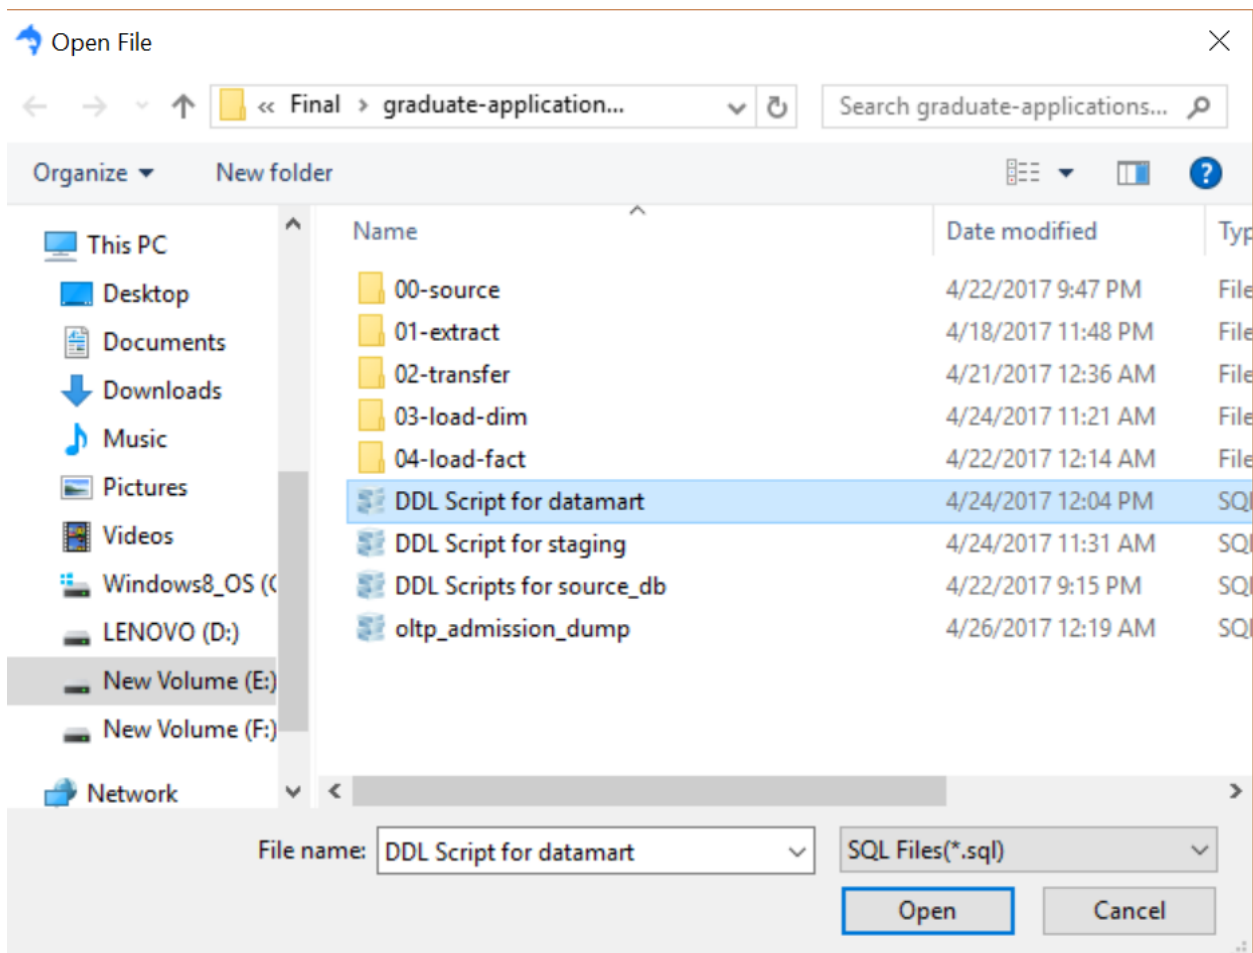

- Execute DDL script for staging db

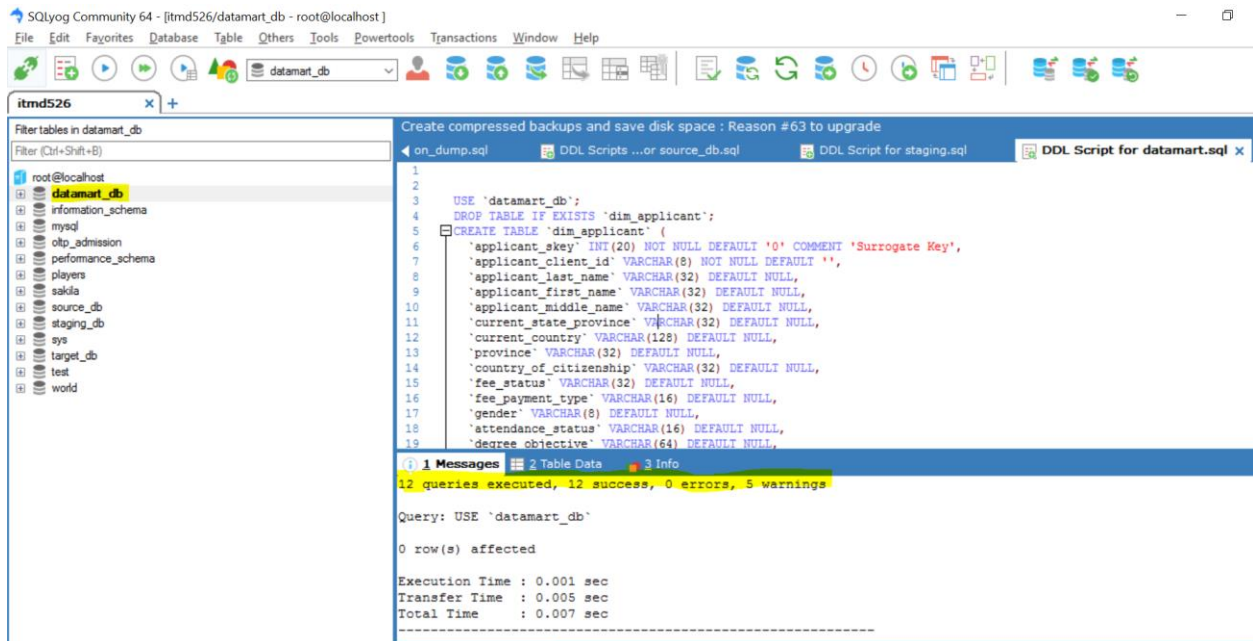

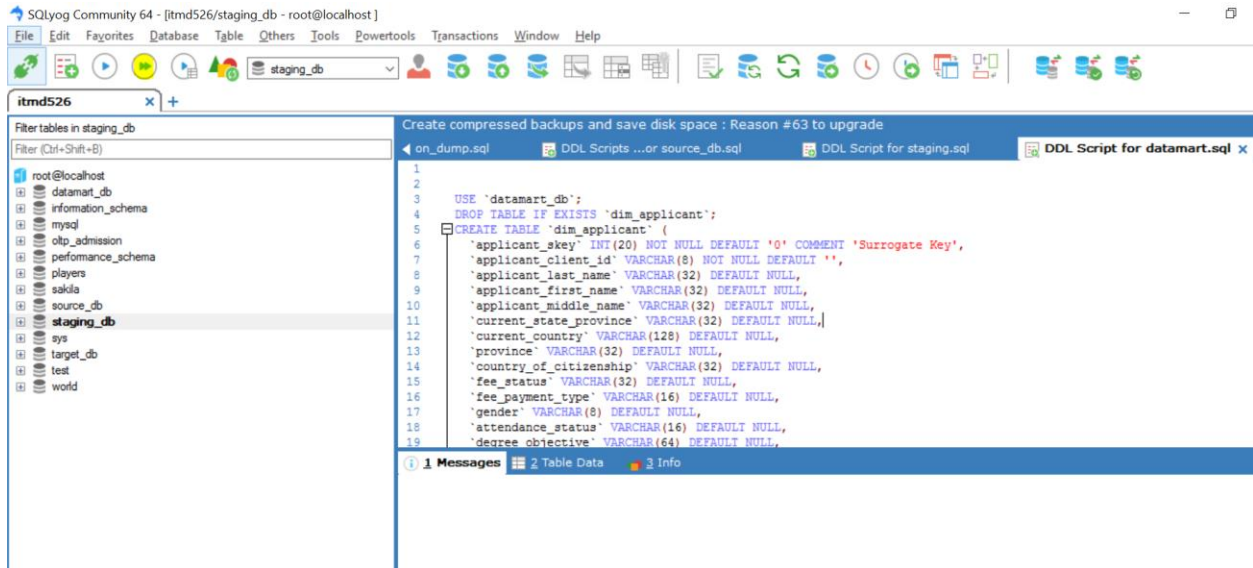

- Execute DDL script for datamart db

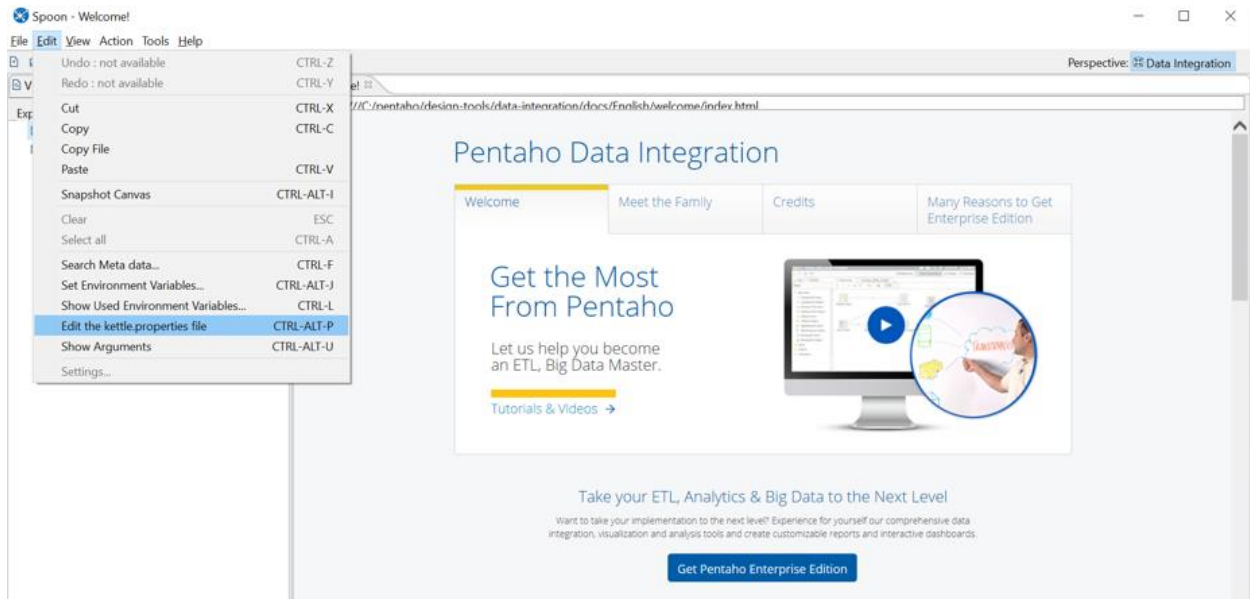

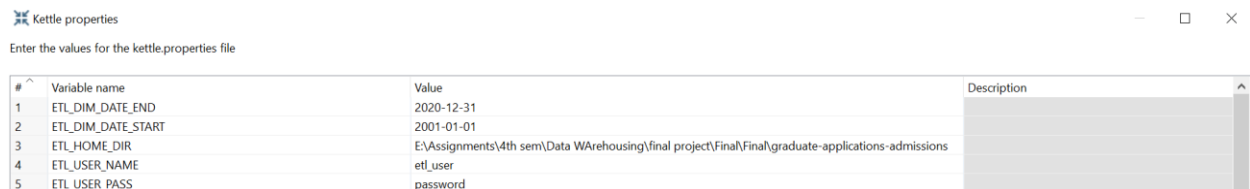

5. Open Spoon.bat to launch pentaho tool and go kettle.properties in edit.

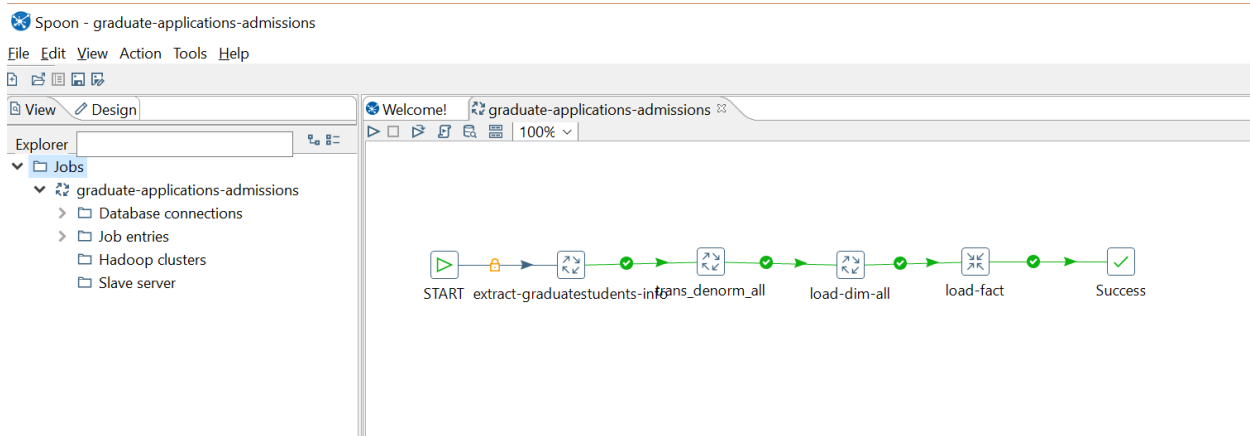

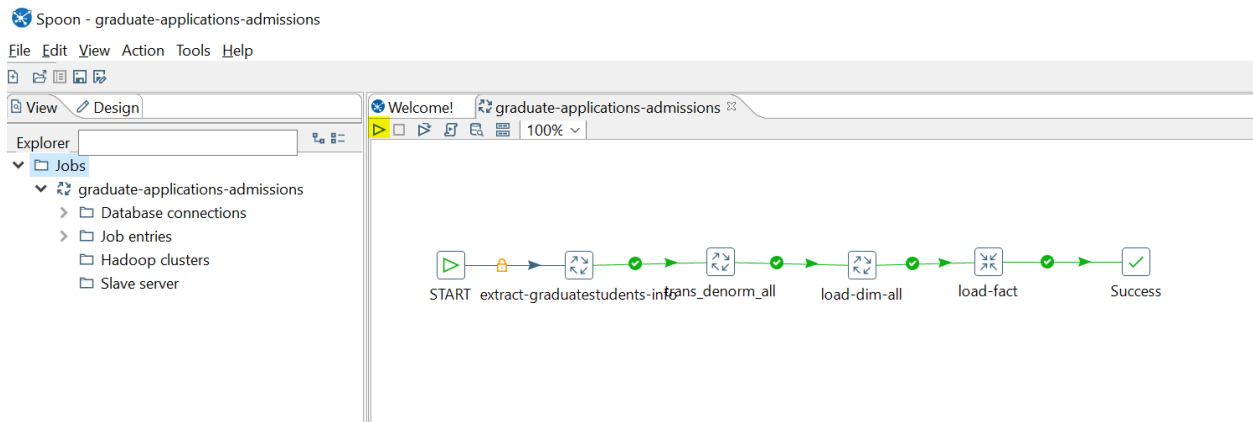

- Set the environment variables as below. Provide ETL\_HOME\_DIR to the local path of the extracted project folder. Click OK.

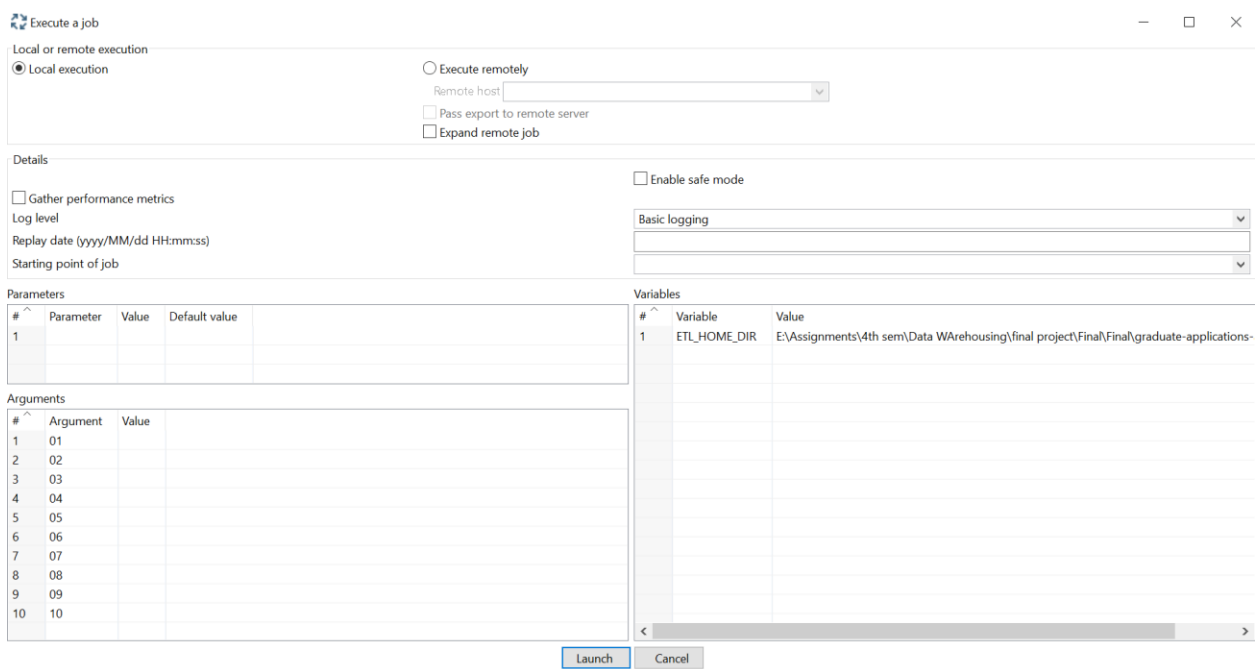

- Go to file → open → Select graduate-applications-admissions.kjb present in the extracted project folder and click open.

8. Execute the job by clicking the highlighted button shown below.

9. Click Launch.

10. Successful execution of the job.
